J-DICTATION

JonokeMed™ Add-on Component.

Let J-Dictation ease your move to Jonoke's Paperless Solution.

Moving from a traditional paper record to a paperless electronic record system can be intimidating. The clinic goes from the familiar paper and pencil to the not-so-familiar keyboard and mouse. Being less proficient with their keyboard and mouse, the doctor's ability to see patients often slows down due to the amount of typing they are required to do.

Jonoke has a great solution for you -- J-Dictation!

WHAT IS J-DICTATION?

J-Dictation provides JonokeMed™ users the ability to digitally dictate patient notes and letters directly into JonokeMed™ and have their digital recordings attached directly to a patient's medical record. These recordings can be used for playback or by a typist to then transcribe the digital recording into a medical record. Once transcribed, the notes can be reviewed and, if needed, compared to what was originally recorded -- saving time and money.

SEE REVERSE FOR MORE FEATURES

J-DICTATION IS YOUR TRANSCRIPTIONIST SPECIALIST. IT'S FAST, FLEXIBLE AND TIME-SAVING -- IMPROVING YOUR WORKFLOW & SAVING YOU MONEY.

WORKS IN A FAMILIAR WAY

Using J-Dictation is so easy. J-Dictation works just like you would expect and has the same familiar feel that your old-fashion physical dictation devices had. In fact, you can take full advantage of many USB devices like foot pedals, microphones, media mice and other specialized USB controllers.

If you are comfortable with using dictation devices, then you will feel right at home with J-Dictation. Moving through the digitally recorded dictations are done just as if you were using a physical dictation machine. Rewind, play, fast forward, along with the additional abilities that you can only get with digital recordings, are all at your fingertips.

The most exciting feature of J-Dictation is the ability to INSERT. What a great time saver. Forgot to add something into the recording? No problem. Rewind back to the point you want to add it. Then insert what you want to say -- dictation acting just like a word processing program on a computer! You will wonder how you ever managed without J-Dictation.

IMPROVED WORKFLOW

J-Dictation's integration with JonokeMed™ continues well beyond what any other central dictation product in the industry has to offer!

As soon as the dictation is saved, JonokeMed™ alerts the transcriptionist(s) that a dictation is ready to transcribe. This happens instantly! No waiting for tapes to be sent (and lost). No matching of paperwork with tapes. As well, each dictation can have a priority attached to it. This way the person dictating can indicate that the dictation is of high priority and must be handled first. As well, you can assign your transcription to a specific transcriptionist or transcription group.

When the list of dictations are presented to the transcriptionist, high priority recordings are shown at the top of the list and subsequent recordings can be listed in the order that they were received or alphabetically by patient.

TRANSCRIPTIONIST FEATURES

Transcriptionists are used to using foot pedals to control recordings. Quickly playing, stopping, rewinding, and moving forward is all supported through the use of foot pedals with J-Dictation in JonokeMed™ -- all the standards of transcription.

TIME SAVINGS

The moment that a dictation is made, JonokeMed™ instantly notifies the transcriptionists that the dictation is ready -- ideal for those rush reports.

The transcriptionist types the report directly into the patient record in JonokeMed™. No longer is transcription done outside of JonokeMed™, where you would then have to 'import' them, or scan reports in. Once the transcriptionist saves the report, the dictator is notified that the report is ready for review.

While reviewing the typed document, the physician can listen to their original dictation to help them recall what was said. Corrections can be made directly by the physician or it can be sent back for retyping with just a click of the mouse.

Further time savings are achieved because as soon as the report is approved, it can be faxed out (FaxButler), or E-Mailed in an encrypted format (CommsButler - E-mail interface), or viewed on the web (WebButler).

Saving yourself time and money, while being more responsive to the needs of your patients.

MORE OPTIONS

J-Dictation allows your transcriptionists to be anywhere. They can all be in one room in the clinic; spread throughout different units in the clinic; or working from home using a secure VPN connection. You now have more options for where your transcription is done.

When the transcriptionist uses J-Dictation they have instant access to all your templates, glossaries, AddressBook, and patient demographics. This reduces dictation times and transcription times.

You will also be able to track exactly how much work they do, as JonokeMed™ counts transcription productivity by characters, words, or lines.

Or if you would rather have Jonoke transcribe your reports, just contact Jonoke about our transcription services today.

COST SAVINGS

To run J-Dictation you no longer need:

- Tapes;
- Dictation recorders or;
- Transcription machines.

JonokeMed™ acts as both your digital recorder and transcription machine. When you update your JonokeMed™ computer, you get your new transcription system. Saving staff, physician, and third party transcription services' time.

CROSS PLATFORM

As with all of Jonoke's products, J-Dictation is a fully cross platform solution. No matter which platform or combination you use, JonokeMed™ and J-Dictation will work within your work flow.

J-DICTIONATION WORK FLOW

As with JonokeMed™, the integrated work flow is what really saves you time. J-Dictation is totally integrated within the JonokeMed™ work flow. Whether you are a radiology group going filmless with JonokeMed™, or a physician wanting to dictate your encounter notes and letters, J-Dictation and JonokeMed™ will work for you!
