COMMS BUTLER

MediFile© Add-on Component.

THE COMMS BUTLER IS YOUR COMMUNICATIONS SPECIALIST. HE'S FAST AND EFFICIENT - TAKING ALL THE DRUDGERY OUT OF SENDING/RECEIVING INFORMATION TO/FROM EXTERNAL SOURCES.

Focus on work. Let your Comms Butler do the talking.

Overwhelmed by the amount of electronic medical information coming in to your clinic? Wondering how to send out the medical information in your MediFile© database quickly, reliably, and safely to the external systems that require it? Wish you had an extra set of hands and a few extra hours in the day? Hire the MediFile© Comms Butler to manage your clinic's electronic communications. It does all the hard work! It shoulders the work of communicating with external systems so you don't have to. Best of all, the Comms Butler is tireless - always there when you need it.

THE COMMS BUTLER GROWS WITH YOU.

The Comms Butler is as resourceful as you need it to be - no more, no less. After you acquire the basic Comms Butler infrastructure you can then personalize your Butler's skill set by adding only the features or interfaces that you need. As your needs grow over time, acquire additional modules that will allow the Comms Butler to do even more.

FULLY-INTEGRATED ACCESS TO ALBERTA'S EHR

The Comms Butler provides instant access to Alberta's EHR (Electronic Health Record) system. You can access all of the patient information you need - local or provincial - right from within MediFile©! And when that data changes, why re-type all of your patient's data into a web browser-based interface? The Comms Butler works hard to make sure that your local patient data and the data on file at a provincial level are always in synch.

Want to know what prescriptions or allergies were uncovered by other doctors since a patient's last visit? No need to jump between two systems. Synchronize your patient's record with the data stored in EHR with a single click. Then view all of the information in one place.

EMAIL LETTERS TO OTHER MEDIFILE© USERS

The Comms Butler allows you to send letters to other clinics that use MediFile©. The letters are sent via encrypted email attachments in your choice of 4D Write or text format. There is no personal information in the email - all sensitive information is encrypted in an attachment that only the recipient can read.

SEND LETTERS TO CAPITAL HEALTH'S EHR SYSTEM

The Comms Butler interface to Edmonton's Capital Health EHR system allows you to send letters from MediFile© to this external system. The information is transmitted to Capital Health via a secure, encrypted VPN (Virtual Private Network).

IMPORT LAB RESULTS - AUTOMATICALLY!

The importing of lab results is included in the base cost of MediFile©. However, if you don't have the Comms Butler, the process can get somewhat tedious since you've got to locate/download the lab result files yourself and then manually import the files into MediFile©.

WANT TO update the patient's EHR record with a new prescription? Simply enter the new prescription into MediFile© like you normally do. When you save the new prescription, the information is automatically uploaded to EHR for you! Plus, EHR will automatically inform you if there are any drug, drug-to-drug, or allergy contraindications apparent. No more searching through tedious reference books!

AUTOMATIC IMPORT OF REPORTS

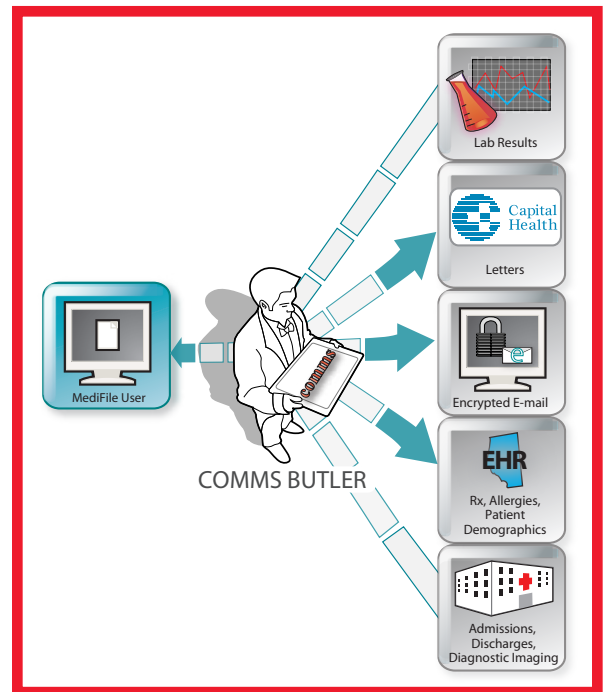

Need quick access to admission reports, discharge reports, and diagnostic imaging? You don't need to pay someone to manually download and import these files. For a one time cost, the Comms Butler can automatically import these electronic reports into MediFile© for you, leaving your staff free to focus on more important, less tedious tasks. The Comms Butlers can automatically import reports from Lakeridge Health Region or Cambridge Hospital. If you'd like a new report import interface built for the Comms Butler to meet your clinic's needs, let us know!

Without the Comms Butler, your workflow probably looks something like this:

1. *Check to see: are there any new external files?*
2. *If there are, download the external files to a local computer.*
3. *Convert the encrypted information into plain text.*
4. *Upload the new files into MediFile© so that all users can view them.*

Think of the time and money that you'd save if you had a Butler to do this **work for you!**

The Comms Butler automatically searches for new lab results and - when it finds them - automatically downloads and imports the files into MediFile©.

WHAT ARE THE HARDWARE REQUIREMENTS?

For small clinics, the Comms Butler can run on your existing Butler computer.

For larger clinics, the Comms Butler may require its own computer. It depends on the demands you place upon it. For a free consultation, contact Jonoke's Sales department.

WHAT SKILLS WILL THE COMMS BUTLER LEARN NEXT? IT'S UP TO YOU!

Do you have a manual, labour-intensive task that you'd like automated? Maybe the Comms Butler can help!

The number of interfaces supported by the Comms Butler is constantly growing. Which interface the Comms Butler "learns" next is based upon two factors: availability and demand. If you don't see an interface that you'd like, ask us!

FOR MORE INFORMATION
