

## Installing the VPN Client Software

1. To install the VPN Client software, locate the VPN executable file in the directory that it was copied to.
2. Double-click on the file to open it.
3. Locate the steup.exe file and double-click on it to begin the installation.
4. Type in the 16-digit **Activation Key** provided by Jonoke with your CD

**VPN Client Installation Wizard** begins the installation.

5. Click **Next** to continue installing the software. The **Software License Agreement** dialogue box appears next.
6. After reading the agreement, you must select **Yes** to continue the installation. If you select **No**, the installation is cancelled.
7. Next, select the type of installation from the three choices in the Select Components dialogue box: **Typical**, **Express**, or **Custom**. The **Typical** installation is sufficient for most users, this is the installation you want to choose.
8. Click **Next** to begin copying files to your computer.
9. After copying is complete, the **InstallWizard Setup Complete** dialogue box is displayed and has the option of restarting the computer now or at a later time. Select **Yes** to restart now, and **No** to restart later. After you restart your computer, an S icon appears in the sys tray near the system clock on your computer.
